Caloosahatchee MFL

Minimum flow and levels evaluation for the Caloosahatchee River Estuary for alternative 'OPT' during the simulated period of record.

Caloosahatchee MFL

Comparison of MFL exceedances across FWO, ECB, CC and OPT during the simulated period of record.

Average annual regulatory flows (QFC flow tag; CRE: S77; SLE: S308) and stress and damaging events based on RECOVER salinity envelope 14-day event counts for Caloosatchee and St Lucie estuaries.

Summarized Data							Percent Different from FWO				
Estuary	Alt	Regulatory Flows (kacft/yr)	Stress Events From LOK ³	Stress Events From Basin ³	Damaging Events From LOK ⁴	Damaging Events From Basin ⁴	Regulatory Flows (kacft/yr)	Stress Events From LOK ³	Stress Events From Basin ³	Damaging Events From LOK ⁴	Damaging Events From Basin ⁴
CRE ¹	NA25 ²	528	183	118	186	173

¹ CRE: Caloosahatchee Estuary; SLE: St Lucie Estuary; ² NA25 = Future without project (FWO)

³ Stressful Flows:

CRE: ≥ 2100 cfs & < 2600 cfs

SLE: ≥ 1400 cfs & < 1700 cfs

⁴ Damaging Flows:

CRE: > 2600 cfs

SLE: > 1700 cfs

Data Source: USACE and SFWMD Interagency Modeling Center. *OPT Alternative* provided by Everglades Foundation

RECOVER Metric

RECOVER salinity envelope evaluation during the simulation period of record for Caloosahatchee (top) and St Lucie (bottom) estuaries.

RECOVER Metric

RECOVER salinity envelope evaluation relative to FWO (NA25) during the simulation period of record for Caloosahatchee (top) and St Lucie (bottom) estuaries.

Daily count of low, optimum, stress and damaging flow events for Caloosatchee and St Lucie estuaries.

Summarized Data								Percent Different from FWO

Daily Metric

Daily salinity envelope evaluation during the simulation period of record for Caloosahatchee (top) and St Lucie (bottom) estuaries. Low, Optimum and Extreme events are from all sources.

Daily Metric

Daily salinity envelope evaluation relative to FWO (NA25) during the simulation period of record for Caloosahatchee (top) and St Lucie (bottom) estuaries. Low, Optimum and Extreme events are from all sources.

Daily Metric - Extreme Events

Monthly count of low, optimum, stress and damaging flow events for Caloosatchee and St Lucie estuaries based on monthly mean discharge data.

Summarized Data								Percent Different from FWO

Monthly Metric

Monthly salinity envelope evaluation during the simulation period of record for Caloosahatchee (top) and St Lucie (bottom) estuaries. Low, Optimum and Extreme events are from all sources.

Monthly Metric

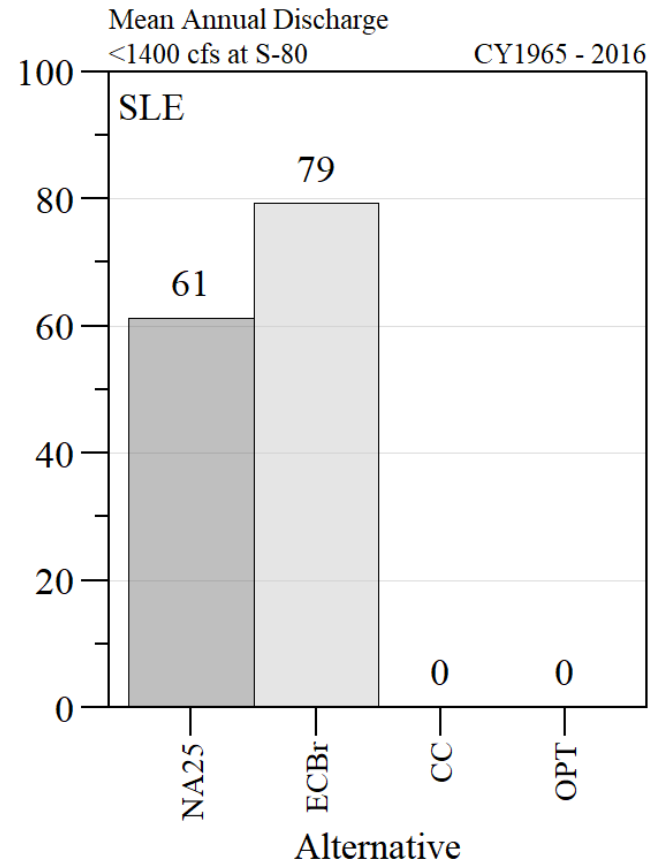

Monthly salinity envelope evaluation relative to FWO (NA25) during the simulation period of record for Caloosahatchee (top) and St Lucie (bottom) estuaries. Low, Optimum and Extreme events are from all sources.

Lake Discharges

Average annual lake discharge volume over the simulation period of record when stress and damaging discharge at S79 and S80, respectively.

Lake Discharges

Average annual lake discharge volume over the simulation period of record when low and optimum discharge at S79 and S80, respectively.

Flood control discharges

Average annual flood control discharges from Lake Okeechobee to Water Conservation Areas and Northern Estuaries over the simulation period of record.

Load

Average percent difference from FWO (NA25) for discharge and estimated nutrient loads over the May 1965 - April 2016 (FL WY 1966 - 2016) period of simulation.

Back Flow/Pump

Average annual load and average percent change relative to FWO (NA25) over the simulation period or record between May 1965 and April 2016 for back flow/pumping from S77, S308 and EAA (S2, S3 and S4) to Lake Okeechobee.

Area	Alt ¹	Average Annual ¹				% Change Compare to FWO		
		Percent Total Inflow Water Budget ¹	Discharge (kAcf-Ft WY ⁻¹) ¹	TP Load (kg WY ⁻¹)	TN Load (kg WY ⁻¹)	Discharge	TP Load	TN Load

¹Simulation period of record between Florida Water Year 1966 - 2016 (May 1965 - April 2016)

Lake Worth Lagoon

- Prior analysis uses a combination of RSMBN (C10A) and RSMGL (S155A) models.
 - RSMGL provides a finer detail modeling of flows used within the basin that is passed through S155A.
- Due to limited information (for OPT Alternative), RSMBN was used to evaluate LOK and Basin flows to LWL.
